

TB-0361

**TERMINATION OF ACTIVE PROCESSING
ON THE Z800**

Issue Date: May 12, 2005
Effective Date: June 12, 2005
Section/Group: Network Operations
Submitted by: Marsha Dotson
Approved by:

With the recent move of the Oracle database environment from CPU2 to the LINUX open systems environment, the workload on the Salt Lake City Z800 has been reduced significantly. Information Technology Services plans to terminate active processing on this Z800, the target date is on June 12, 2005.

The Z800 machine, with mainframe LPAR's CPU2, CPU8, and CPU1, will remain intact, powered up, and under maintenance at the Salt Lake Data Center for several months after decommissioning.

Performance and capacity monitoring indicates that the Z900 has the capacity to manage the anticipated workload without impacting customer processing. Any remaining applications currently residing on the Z800 will be moved to the Z900 prior to, or on June 12, 2005. Notification of these moves will be tracked through the Change Management system, and discussed in the Thursday, 9:00 a.m. Change Meetings.

Any JCL that currently references CPU2, CPU8, or CPU1 must be changed prior to June 12, 2005. The job classes (O and Z) that were reserved for customer usage will become invalid on that date.

The following DNS name will no longer exist after June 12, 2005.

CPU2
